

## My Council Services - Customer Self-Service Kiosk

The Customer Self-Service Kiosk is a fully integrated component of the self-service and CRM suite. Leveraging the My Council Services native mobile application technology, it offers UK local authorities an easy-to-use solution, allowing customers to complete transactions across a full range of council customer points. In the context of the inexorable move to digital self-service, the Customer Self-Service Kiosk, offers a safe and secure hybrid option. It is especially helpful in the following scenarios:

It is extremely valuable when there is a requirement to submit official documents and where these documents require council verification. Customers can self-scan at a secure kiosk in the council offices or other appropriate facilities and can have the submitted documentation verified on the spot.

It provides customers who are perhaps less confident with using digital technology on their own, the reassurance of a trained and friendly customer service agent being on hand, to benefit from the digital processes that your council has made available.

It allows for assisted transactions without compromising the efficiency of other digital processes. One of the key benefits of this process is the comprehensive audit trail of user activity and data that is captured.

The Customer Self-Service Kiosk is ideally suited to high volume requests such as:

Bus applications  
& renewals

Housing benefit  
claims

Council tax  
reduction claims

Change in  
circumstances

School transport  
applications

Blue badge  
claims
